

NEW DUST SUPPRESSANT TECHNOLOGIES CERTIFIED BY THE US EPA ETV

The U.S. Environmental Protection Agency's Environmental Technology Verification Program completed a 100-day study evaluating the effectiveness of new dust suppressant technologies at a U.S. military training site. The just released report found new technologies that controlled PM2.5, PM10 and Total Particulate with control efficiencies of 100%. In addition, silt loading measurements show remarkable silt reduction results. The products, EK35® and EnviroKleen®, are the newest, most advanced dust suppressant technologies introduced in North America over the past 25 years.

EnviroKleen® and EK35® control dust and erosion on areas such as:

- Runways
- Vehicle Staging Areas
- Helicopter Landing Zones
- Unpaved Roadways
- Underground Mines
- Areas Adjacent to Living Quarters
- Campgrounds
- Truck Terminals

Tested and Certified by:
